

“Good forensic mental health care is a key part of a modern mental health service... The **Forensic Mental Health masters course** should provide an excellent opportunity for staff to develop competencies in this specialist field.”

Prof. Louis Appley
National Clinical Director for
Health and Criminal Justice

MSc Forensic Mental Health

A flexible evidence-based postgraduate programme in advanced forensic mental health practice

Applications invited for September 2011 intake

Applications for one or more individual modules welcome.

Accreditation of prior learning (APL) considered for experienced medical and clinical staff.

The School of Community Based Medicine at the University of Manchester is delighted to offer this exciting MSc in Forensic Mental Health with next intake starting in September 2011.

The course is open to students from a multidisciplinary and multiagency background.

The programme is skills-based and runs on a part-time modular basis up to 3 years.

Teaching will be a blend of face-to-face teaching and e-learning and will include completion of a masters dissertation.

Modules will be delivered by leading authorities in the field of forensic mental health.

Topics covered include:

- Clinical psychiatry
- Risk assessment
- Personality disorder
- Applied law
- Research methods
- Advanced risk analysis including sex offender assessment & treatment

Optional modules are also available and include CBT and family interventions.
